Introduction, Data Overview, and Data Dictionary

The Issue: Voter turnout in the US is low compared to other developed nations.

Voter turnout refers to the percentage of eligible voters who actually cast their ballot in an election. This issue is important because a high voter turnout is essential for a functioning democracy, as it ensures that elected officials are representative of the will of the people. Low voter turnout can result in a lack of political engagement and can lead to policies that do not reflect the needs and interests of all members of society. This project aims to identify the factors that contribute to low voter turnout and explore strategies that can be implemented to increase participation in future elections.

The Data: This study will compile quantitative data from a variety of trusted sources and databases.

This will include:

1. Voter turnout rates for past US elections, broken down by state, region, demographic group, and other relevant factors
2. Demographic data on the US electorate, such as age, gender, race, income, and education level, which can be used to analyze patterns in voter behavior and identify disparities in participation
3. Information on the voting process, such as registration requirements, early voting options, and mail-in voting programs, to identify policies and practices that may impact voter turnout
4. Political engagement and trust in the electoral process, as measured by surveys and other metrics

Purpose

The purpose of this study is to explore the issue of low voter turnout in US elections and identify strategies that can be implemented to increase participation. The research will involve gathering and analyzing a comprehensive assortment of credible sources, including quantitative data on voter turnout rates, demographic information, and information on the voting process. The goal of this research is to provide evidence-based recommendations for policies and strategies that can be implemented to increase voter turnout in future elections. By examining a broad range of credible sources, this study aims to provide a comprehensive and nuanced understanding of the factors that contribute to low voter turnout and the most effective ways to address this issue.

Specific purposes include:

1. To identify the factors that contribute to low voter turnout in US elections, including demographic, socioeconomic, and political factors
2. To analyze patterns and trends in voter behavior and participation rates, including disparities in turnout rates among different demographic groups
3. To gather data on successful strategies for increasing voter turnout, including get-out-the-vote campaigns, early voting options, and mail-in voting programs
4. To examine the impact of the voting process, including registration requirements, polling locations, and accessibility, on voter turnout rates
5. To conduct interviews with voters and non-voters to gain insights into their motivations and barriers to participation
6. To provide evidence-based recommendations for policies and strategies that can be implemented to increase voter turnout in future US elections
7. To contribute to the body of knowledge on the issue of voter turnout in US elections and inform future research on this topic

Significance: This issue impacts the legitimacy and effectiveness of democratic governance. By exploring the factors that contribute to low voter turnout and identifying strategies to increase participation, this research project aims to ensure that every voice is heard and every vote counts. Through evidence-based recommendations for policies and strategies, this study has the potential to inform and improve the democratic process, promote greater political engagement and representation, and contribute to a more inclusive and thriving democracy.

Methods

We obtained our data by conducting thorough searches across a variety of trusted sources and databases. This process allowed us to gather a comprehensive collection of information that we have used to inform our analysis and insights. We have taken steps to verify the information wherever possible, and we are confident that the data we have gathered is of the highest quality and has allowed us to provide a rigorous and well-informed perspective on the subject at hand.

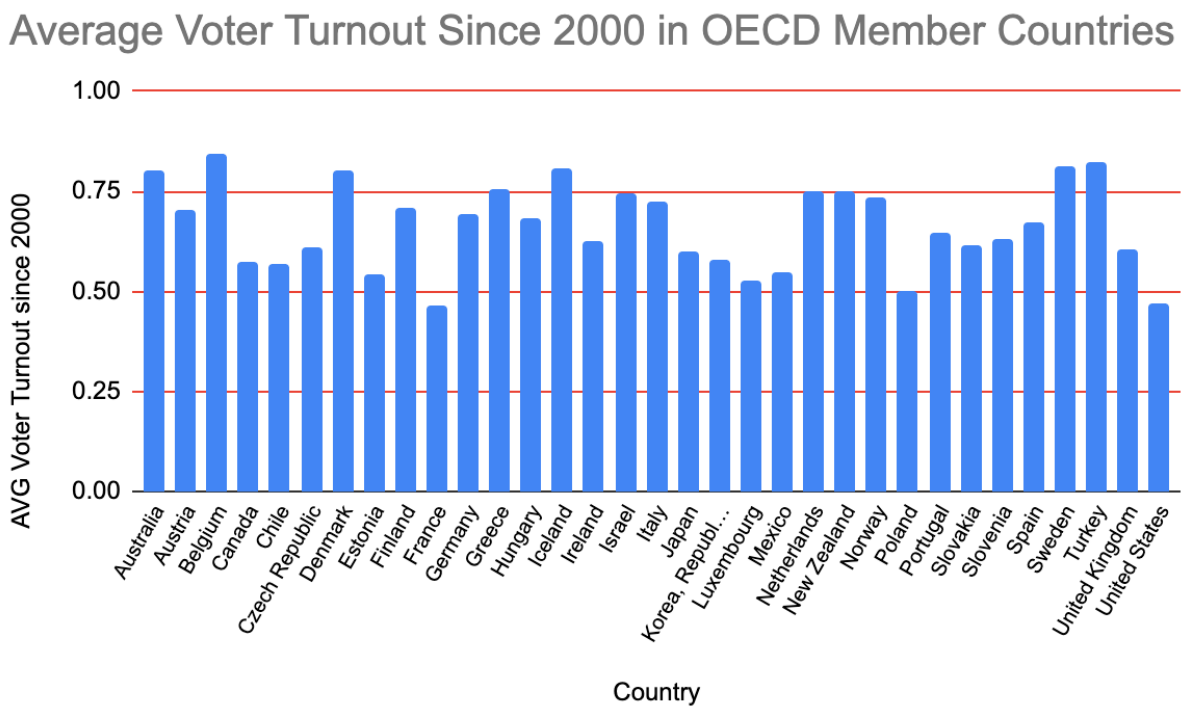
Datasets were acquired from the following sources:

1. Council on Foreign Relations
2. International Institute for Democracy and Electoral Assistance
3. Pew Research Center
4. United States Census Bureau

Full bibliography can be found on page 12.

Results

Establishing the Issue:



Data Source: International Institute for Democracy and Electoral Assistance (See Appendix Datasheet 1)

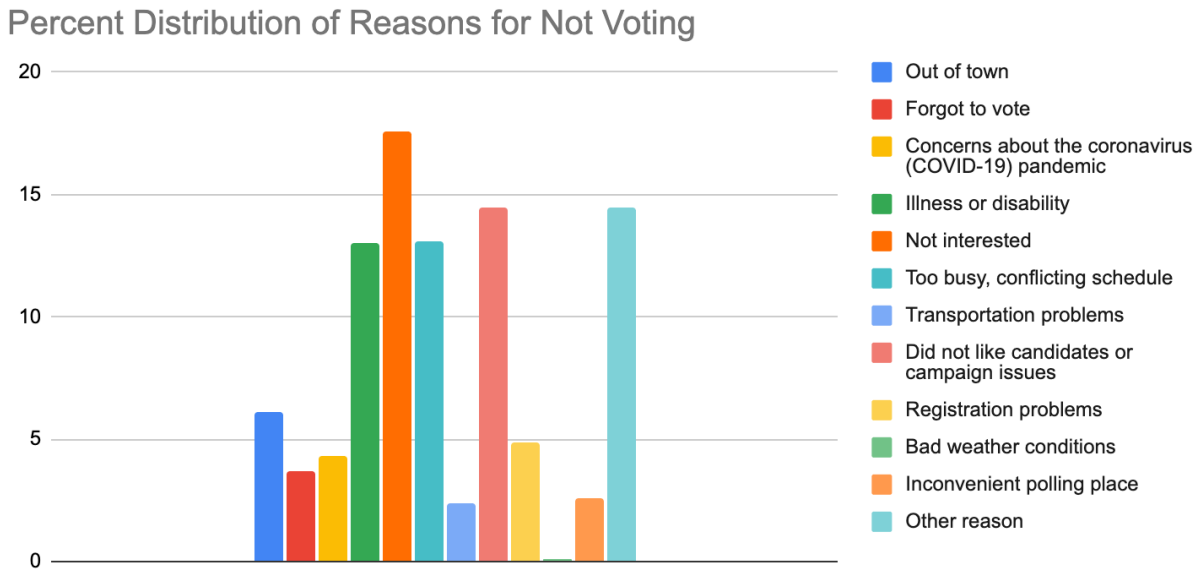
The OECD (Organization for Economic Co-operation and Development) is an intergovernmental agency founded by the United States and 19 other countries in 1961 to stimulate the global economy and trade. It has since grown to 38 member countries which collectively comprise 62.2% of global GDP. The majority of these countries are considered highly developed due to their high-income economies and top ratings on the Human Development Index.

One might believe that the United States of America, a founding member of this organization and a country considered a global superpower in recent times with the largest economy in the world, would lead these nations in a simple show of democratic power. Such as voter turnout. However, the US ranks only second to last in voter turnout for parliamentary elections since the turn of the century when compared to these countries.

To investigate this issue we shall first look into the demographics of the United States electorate.

Why Americans Don't Vote:

Using data from the US Census Bureau we looked into why voting-eligible people did not vote in the 2020 election.



Data Source: U.S. Census Bureau (See Appendix Datasheet 2)

Some of the top answers were that respondents were "not interested", "too busy", and "did not like candidates or campaign issues"

Voter apathy, as evidenced by these top reasons for not voting, is a concerning trend in any democracy. When individuals choose not to exercise their right to vote, they essentially give up their voice in the political process. They relinquish their power to shape the future of their community and country.

This lack of participation can result in a lack of accountability for elected officials, as they may not feel the need to represent their constituents' interests if they believe that voter turnout will be low. This, in turn, can lead to a lack of trust in government and a feeling of disengagement among citizens.

If large segments of the population are not participating in the democratic process, then the elected officials may not be representative of the population as a whole. This can lead to policies that do not reflect the needs and wants of the people they are supposed to serve.

One of the other highest responses was "illness or disability". The high response of illness or disability as a reason for not voting may have been particularly significant in light of the COVID-19 pandemic. However, it is also important for our government to ensure that individuals with disabilities have equal access to the ballot box. This may involve providing accommodations such as accessible polling places, assistance for voters who have difficulty marking their ballots, and alternative methods of voting such as mail-in ballots or early voting. We will go more in-depth about this in our conclusions.

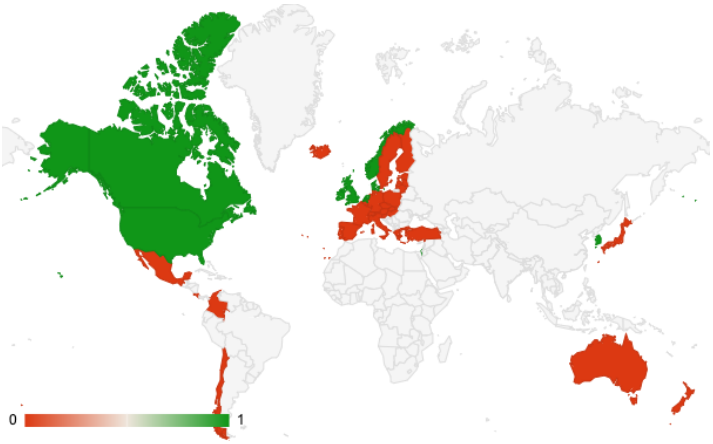
"Out of town" and "forgot to vote" although low in the overall non-voter pool were much higher in the age 18-24 category. Being 44.26% and 54.05% higher, respectively. This highlights the importance of making it easier and more convenient for young people to vote. Many young people may be in college or starting their careers, which can make it difficult for them to find the time and resources to vote. Additionally, younger voters may be less familiar with the voting process and may need more support to navigate the system.

Finally, "registration problems", "transportation problems", and "inconvenient polling places" all added up to nearly 10% of responses. This furthermore shows that we need to address systemic barriers to voting that can prevent individuals from exercising their right to vote.

Voting Day = Holiday?

Making Election Day a national holiday has been suggested as a way to increase voter turnout and make it easier for individuals to participate in the democratic process. In many countries, including several in the Organisation for Economic Co-operation and Development (OECD), elections are held on weekends or are designated as national holidays.

This map of OECD countries and when their elections are. Green = weekends. Red = weekdays

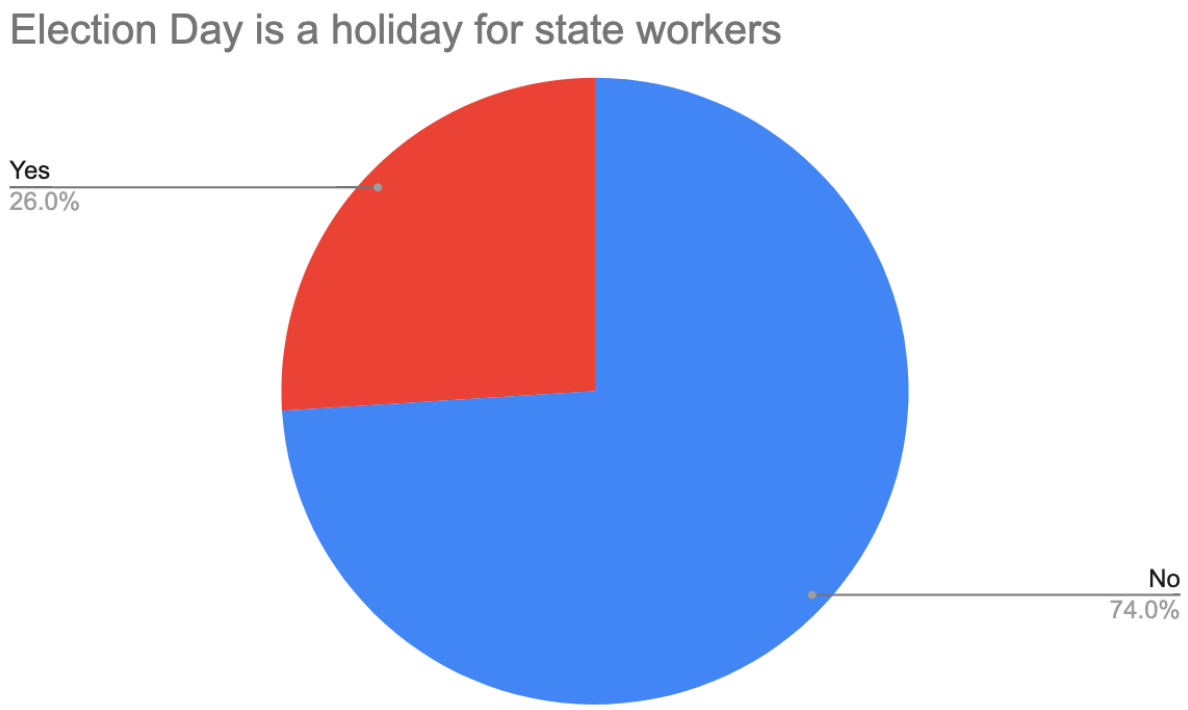


Data Source: Pew Research Center (See Appendix Datasheet 3)

There are several benefits to making Election Day a national holiday. First, it would make it easier for individuals to find time to vote without having to take time off work or school. This is particularly important for those who have long work hours or multiple jobs, as well as individuals who may not have access to reliable transportation to polling places.

Second, making Election Day a national holiday could help to increase voter turnout, as individuals would have more time to cast their ballots. Low voter turnout has been a persistent issue in many countries, including the United States, and making it easier for individuals to vote is an important step toward addressing this problem.

Currently, 13 states have already made Election Day a holiday for state workers. Why not extend this right to every single American so that they can be an active participant in our democracy?



Data Source: Pew Research Center (See Appendix Datasheet 3)

Finally, designating Election Day as a national holiday sends a message that voting is a fundamental right and a cornerstone of democracy. It reinforces the idea that every citizen's voice matters and that all individuals should have the opportunity to participate in the democratic process.

Conclusions

Our research has demonstrated that the United States is facing a significant challenge with low voter turnout. This trend is alarming, as it undermines the very foundation of our democracy, which is built on the principles of popular sovereignty and civic engagement.

One of the most critical steps that the United States can take to address this issue is to make it easier for its citizens to vote. This can be accomplished through a variety of measures, such as expanding early voting, allowing mail-in voting, making polling places more accessible, and making Election Day a national holiday.

By implementing such policies, we can remove many of the barriers that prevent people from exercising their right to vote. This would not only increase voter turnout but also ensure that a more diverse and representative group of individuals participate in our elections.

Improving access to the polls would help to reinforce the legitimacy of our political system and enhance public trust in the electoral process. When more people participate in elections, our elected officials are more accountable to the will of the people and better reflect the interests of the electorate.

In short, it is essential for the United States to take steps to make voting easier and more accessible. Doing so would not only increase voter turnout but also help to strengthen our democracy and ensure that it remains vibrant and healthy for generations to come.

Next Steps

Moving forward, there are several next steps that could be taken to expand our knowledge on low voter turnout in the United States. One important avenue for future research would be to investigate the reasons behind the disparities in voter turnout among different demographic groups. This could involve analyzing the impact of factors such as socioeconomic status, education level, and race/ethnicity on voter participation.

Additionally, it would be beneficial to conduct research on how to ensure the security and safety of elections in the United States. Recent elections have seen a surge in concerns about the integrity of the electoral process, and it is critical to address these concerns to maintain public trust in the system. Future research could explore the most effective ways to prevent voter fraud, ensure the accuracy of vote counts, and safeguard against cyber attacks on election systems.

While further research is undoubtedly necessary, we must also take action now to address the issue of low voter turnout. One of the most effective ways to make a difference is to voice our support for policies that make voting more accessible to our local representatives. By calling or writing to our elected officials, we can let them know that we care about this issue and want to see concrete steps taken to address it.

Furthermore, we can encourage our friends, family members, and colleagues to vote in elections and make sure they have the information they need to do so. By working together to promote a culture of civic engagement and participation, we can help ensure that the United States remains a vibrant democracy for years to come.

TECHNOLOGY STUDENT ASSOCIATION

“A Look Into Current Voter Turnout in US Elections and How It Can Be Increased”

2001-2

National TSA Conference

TECHNOLOGY STUDENT ASSOCIATION

Introduction

The Issue: Voter turnout in the US is low compared to other developed nations.

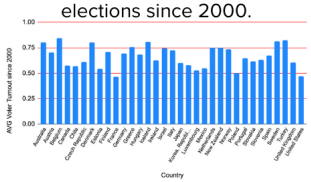
The Data: This Study gathered quantitative and qualitative data from trusted sources and databases, including past US election turnout rates by state, region, and demographic factors, US electorate demographics, voting program info, and political engagement/trust metrics.

Purpose

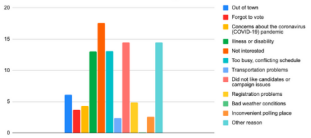
This study aims to **analyze the low voter turnout** in US elections and suggest strategies to **increase participation**. The goal is to provide evidence-based recommendations for policies to increase future voter turnout. The study aims to **comprehensively understand the factors** causing low voter turnout and determine effective ways to **address this issue**.

Results

The US has had the **second lowest** average voter turnout of OECD countries in parliamentary elections since 2000.

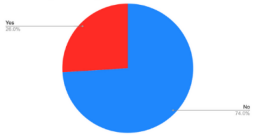


Reasons cited by non-voters for not participating in elections.



Many high turnouts countries make voting day a **national holiday** or hold **weekend elections** (red) rather than weekday elections.

26% of US states make voting day a **holiday for state workers**.



Methods

We collected data from **trusted sources** and databases, and we made our best efforts to **verify information**. This has enabled us to provide a **well-informed analysis** of the subject with high-quality data.

References

- Council on Foreign Relations
- International Institute for Democracy and Electoral Assistance (IDEA)
- Pew Research Center
- United States Census Bureau

Conclusion

Low voter turnout is a **significant issue** in the US. Making it easier for citizens to vote can help us to **increase voter turnout**.

Measures such as expanding early voting, allowing mail-in voting, making polling places more accessible, and making Election Day a national holiday can help achieve this goal.

Increasing turnout would ensure a **more diverse and representative** group of individuals participate in elections and **strengthen our democracy**.

Next Steps

- Investigate reasons for disparities in turnout among different demographic groups.
- Conduct research on ensuring the security of elections.
- Voice support for policies that make voting more accessible.
- Encourage others to vote and provide necessary information.
- Promote a culture of civic engagement and participation.

1 Only individuals who report not voting but also report being registered are asked the question about reason for not voting.

2 Family income is limited to persons who report income or refuse to answer the income question. Respondents who report not knowing their income are not included in this section, which includes only the reference person with relatives in the household or people with the following relationship to the householder: spouse, child, grandchild, parent, sibling, or other relative. This section excludes foster children, unmarried partners, non-relatives, and roommates.

NOTES:

A dash '-' represents zero or rounds to zero.

Estimates may not sum to totals due to rounding.

Reasons For Not Voting, By Selected Characteristics US Census Bureau (Datasheet 2)

	Income not reported	2.6	1.9	2	3.8	3.8	3.3	1.9	3.7	1.8	0.6	1.5	3.8	2.2	
1 Family income is limited to persons who report income or refuse to answer the income question. Respondents who report not knowing their income are not included in this section, which includes only the reference person with relatives in the household or people with the following relationship to the household: spouse, child, grandchild, parent, sibling, or other relative. This section excludes foster children, unmarried partners, non-relatives, and roommates.															
NOTES:															
Only individuals who report not voting but also report being registered are asked the question about reason for not voting.															
A dash '-' represents zero or rounds to zero.															
For information on confidentiality protection, sampling error, nonsampling error, and definitions, see hhttps://www.census.gov/programs-surveys/cps/technical-documentation/complete.2020.html

Student Copyright Checklist

STUDENT COPYRIGHT CHECKLIST *(for students to complete and advisors to verify)*

STUDENT: Answer question 1 below.

1) Does your solution to the competitive event integrate any type of music and/or sound? ☐ YES ☒ NO

   If NO, go to question 2.

   If YES, is the music and/or sound copyrighted? ☐ YES ☐ NO

   If YES, move to question 1A. If NO, move to question 1B.

   1A) Have you asked for author permission to use the music and/or sound in your solution and included that permission (letter/form) in your documentation? If YES, move to question 2. If NO, ask for permission and if permission is granted, include the permission in your documentation.

   1B) Is the music/sound royalty free, or did you create the music/sound yourself? If YES, cite the royalty free music/sound OR your original music/sound properly in your documentation.

CHAPTER ADVISOR: Sign below regarding your student's answer(s) to the use of music/sound in his/her competitive event solution. Even if your student answers "NO" to question 1, please sign below noting that you have evaluated the competitive event solution and the student answered the question(s) accurately.

I, _____ (chapter advisor), have checked my student's solution and confirm that any use of music/sound is done so with proper permission and is cited correctly in the student's documentation and/or the solution has been found to have no music/sound included.

STUDENT: Answer question 2 below.

2) Does your solution to the competitive event integrate any graphics/videos? ☐ YES ☒ NO

   If NO, go to question 3.

   If YES, is(are) the graphics/videos copyrighted, registered and/or trademarked? ☐ YES ☐ NO

   If YES, move to question 2A. If NO, move to question 2B.

   2A) Have you asked for author permission to use the graphics and/or videos in your solution and included a permission (letter/form) in your documentation for graphic/video used? If YES, move to question 3. If NO, ask for permission and if permission is granted, include the permission in your documentation.

   2B) Is(are) the graphics/videos royalty free, or did you create your own graphic? If YES, cite the royalty free graphics/videos OR your own original graphics/videos properly in your documentation.

CHAPTER ADVISOR: Sign below regarding your student's answer(s) to the use of graphics/videos in his/her competitive event solution. Even if your student answers "NO" to question 2, please sign below noting that you have evaluated the competitive event solution and the student answered the question(s) accurately.

I, _____ (chapter advisor), have checked my student's solution and confirm that the use of graphics/videos with proper permission and is cited correctly in the student's documentation and/or the solution has been found to have no graphics/videos included.

STUDENT: Answer question 3 below.

3) Does your solution to the competitive event use another's thoughts or research? ☒ YES ☐ NO

   If NO, this is the end of the checklist.

   If YES, have you properly cited other's thoughts or research in your documentation? ☒ YES ☐ NO

   CHAPTER ADVISOR: Sign below regarding your student's answer(s) to having integrated any thoughts/research of others in his/her competitive event solution. Even if your student answers "NO" to question 3, please sign below noting that you have evaluated the competitive event solution and the student answered the question(s) accurately.

   I, _____ (chapter advisor), have checked my student's solution and confirm that the use of the thoughts/research of others is done so with proper permission and is cited correctly in the student's documentation and/or the solution has been found to have all original thought with no use of other's thoughts/research.
